

Master's in the Management of Information Technology (M.S. in MIT)

**12 months in Charlottesville, Virginia or
16 months in Metropolitan Washington, DC/Reston, Virginia**

Benefits to Participating Organizations

McIntire's Master of Science in the Management of Information Technology has been recognized nationally as a leader in developing technology savvy, business decision-makers. The M.S. in MIT offers the high quality program demanded by your most valued business and technology employees while encouraging them to remain on-the-job.

The McIntire Program provides an intensive, collaborative learning experience that draws upon the expertise of senior full-time faculty, classmates, and corporate partners. From the first day of class, participants will learn new skills and techniques that can be immediately applied to enhance their job performance. Through case studies, project post mortems, best practice reviews and team assignments, students will be challenged to understand how current and emerging technology can best be applied to help your organization become more profitable, productive and competitive.

Because participants must work closely with classmates from both management and technical orientations, they often become champions for creating stronger business-technology alliances across the enterprise. Better communication, closer alignment of business and technology plans, and more effective IT decision-making are just some of the benefits realized by sponsoring organizations. In addition, participants learn to effectively:

- Deliver business value for your organization through effective use of IT
- Manage, structure, and evaluate IT and human resources to support and enable your business strategy
- Design and implement IT driven business processes
- Integrate business operations and information across the enterprise
- Harness organizational information for more effective decision making
- Plan for, evaluate and select current and emerging information technologies
- Manage project lifecycles, including estimation and scheduling, staffing, budgeting, and activity-based costing.
- Effectively manage business alliances, vendor relationships and sourcing

For more information about how McIntire can help create new opportunities for your employees and your organization, please contact Cyndy Huddleston, Associate Dean, Corporate Relations and Programs, McIntire School of Commerce, University of Virginia, via email cnh2n@virginia.edu, her direct extension (703) 771-2509 or toll-free (877) 349-2620.
